Nucleotide number is based on the first nucleotide of the start codon being +1 of human α_{1x}AR cDNA (GeneBank accession number is L31774). TM: transmembrane region; IL: intracellular loop. SNPs are identified from 281 individuals: Coriell n=90 (enriched for minorities but exact race not known), Black n=43, Hispanic n=40, caucasian n=101. *It is a Whitehead Internal ID cited from website http//www.cardiogenomics.org.

pK_i values for the binding of agonists and antagonists were determined in competition binding experiments on rat-1 cell membranes stably transfected to express $\alpha_{1a}AR$ WT or its SNPs (receptor density > 1.5 pmol/mg protein). K_d values for the antagonist [125 I]HEAT and receptor densities were determined from saturation binding studies. *P<0.05, **P<0.01 compared with α_{1a}AR WT. Data are reported as the mean±SEM of 3-7 different experiments.

pK₁ values for the binding of agonists and antagonists were determined in competition binding experiments on rat-1 cell membranes and receptor densities were determined from saturation binding studies. **P<0.01 compared with α₁₄AR WT. Data are reported as the stably transfected to express $\alpha_{1a}AR$ WT or its SNPs (receptor density < 0.5 pmol/mg protein). K_a values for the antagonist [125]HEAT mean±SEM of 3-5 different experiments.

Table \P Functional alterations and clinical implications of human $\alpha_{\rm la}AR$ SNPs

SNP	Functional Alteration(s)	Possible Biological Mechanisms	Clinical Implications
R166K	Decreases binding affinity for	Hampers agonist binding to residue	1) The homozygous form might provide a novel
		F163	mechanism underlying human hypotension
	reduces potency of NE in stimulating		syndromes, 2) may protect against sympathetically-
	IP, formation		mediated hypertension
1200S	Decreases binding affinity for	Influences three consecutive residues	May explain variable individual response to drug
	antagonist phentolamine	(Q177, I178, N179) involved in	treatments
		phentolamine binding	,
COATE	Enhances receptor activity and	Unknown	1) Might be relevant to cardiovascular remodeling
	stimulates cell prowth		(e.g. in hypertension, atherosclerosis, myocardial
			hypertrophy) and benign prostatic hyperplasia, 2)
			May be important in neoplastic transformation (e.g.
		,	some cancers such as prostate cancer)
V3111	Decreases binding affinity for	Stabilizes the salt-bridge	Same as SNP R166K
	endogenous agonists, reduces potency		
	of NE in stimulating IP ₃ formation
